

# Eligibility List 2023

The Global Fund's allocation-based approach enables strategic investment to accelerate the end of HIV/AIDS, tuberculosis and malaria and build resilient and sustainable systems for health. Allocations are made once every three years following the outcomes of the Global Fund's replenishment.

The list set forth below reflects the eligibility determinations for the year 2023. The 2023 Eligibility List identifies which country components are eligible for an allocation for the 2023-2025 allocation period in support of the Global Fund Strategy for 2023-2028, [Fighting Pandemics and Building a Healthier and More Equitable World](#). If a country has no eligible components, it does not appear on the list. Please note that eligibility does not guarantee an allocation.

The Global Fund's Eligibility Policy<sup>1</sup> is designed to ensure that available resources are allocated to, and invested in, countries and regions with the highest disease burden, the least economic capacity, and where key and vulnerable populations are disproportionately affected by the three diseases. Eligibility is determined by a country's income classification<sup>2</sup> and disease burden<sup>3</sup>. All low and lower-middle income countries are eligible, regardless of disease burden. Upper-middle income countries must have at least a 'high' burden of disease<sup>4</sup> to be eligible for Global Fund financing<sup>5</sup>.

A multi-country application is only eligible for funding where the majority (at least 51 percent) of countries included in the application would be eligible to submit their own request for funding for that same disease through a single-country application. Please refer to the notes that follow the list for additional information. Please direct questions about the list to: [accesstofunding@theglobalfund.org](mailto:accesstofunding@theglobalfund.org).

---

<sup>1</sup> Global Fund Eligibility Policy, as set forth in Annex 1 to GF/B47/02 (the 'Revised Eligibility Policy') and approved by the Board in May 2022 under decision point GF/B47/DP03.

<sup>2</sup> The Global Fund uses an average of available GNI per capita data (World Bank Atlas Method) over the latest three-year period to determine a country's income classification. Please see Notes for more information on how averages are calculated. Data for this Eligibility List were extracted from the World Bank website on 1 August 2022.

<sup>3</sup> The latest available disease burden data is provided by headquarters of UNAIDS for HIV and WHO for tuberculosis and malaria.

<sup>4</sup> Paragraph 8a of the Eligibility Policy defines the disease burden criteria and thresholds for upper-middle income eligibility.

<sup>5</sup> Exceptions apply. See paragraphs 8b, 9a, and 9b of the Eligibility Policy for more information.

## Eligibility List 2023

Country	Income Classification	Disease Component	Disease Burden	Eligibility
Afghanistan	LI	HIV	Not High	Eligible
Afghanistan	LI	Malaria	High	Eligible

## Notes to changes in eligibility status

<sup>a</sup> Armenia's HIV disease burden classification changed from "Not High" in 2022 to "High" in the 2023 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible. This component was eligible for Transition Funding in the 2020-2022 allocation period, however the Board exceptionally approved an additional period of eligibility for Transition Funding for the 2023-2025 allocation period (GF/B47/DP04), noting that eligibility does not guarantee an allocation.

<sup>b</sup> Cabo Verde is now listed on the latest WHO "Supplementary List" of countries that are malaria-free, as such Cabo Verde's malaria component is no longer eligible. Cabo Verde has an existing malaria grant and is therefore eligible for Transition Funding for the 2023-2025 allocation period, noting that eligibility does not guarantee an allocation.

<sup>c</sup> Colombia's TB disease burden classification changed from "Not High" in 2022 to "High" in the 2023 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

<sup>d</sup> Dominican Republic's TB disease burden classification changed from "Not High" in 2022 to "High" in the 2023 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

<sup>e</sup> El Salvador was certified as malaria-free by WHO in 2021, as such El Salvador's malaria component is no longer eligible. Since there is no existing malaria grant for El Salvador, it is not eligible for Transition Funding in the 2023-2025 allocation period.

<sup>f</sup> This component was eligible for Transition Funding in the 2020-2022 allocation period, however the Board exceptionally approved an additional period of eligibility for Transition Funding for the 2023-2025 allocation period (GF/B47/DP04), noting that eligibility does not guarantee an allocation.

<sup>g</sup> Guyana meets one determination of eligibility in 2023 for malaria in line with the current Eligibility Policy which allows for countries classified by the International Development Association (IDA) as IDA-eligible Small States to be eligible regardless of disease burden. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible. This component was eligible for Transition Funding in the 2020-2022 allocation period, however the Board exceptionally approved an additional period of eligibility for Transition Funding for the 2023-2025 allocation period (GF/B47/DP04), noting that eligibility does not guarantee an allocation.

<sup>h</sup> Iran was classified as a lower-middle income country based on the latest three-year average GNI per capita (Atlas Method) in the 2022 Eligibility List. After meeting eligibility criteria for two consecutive eligibility determinations, the TB component is now classified as eligible, noting that eligibility does not guarantee an allocation.

<sup>i</sup> Iraq's TB disease burden classification has changed from "High" in 2022 to "Not High" in the 2023 Eligibility List. As Iraq is classified by the Global Fund as a Challenging Operating Environment (COE) this component is still eligible under paragraph 10 of the Eligibility Policy, noting that eligibility does not guarantee an allocation.

<sup>j</sup> Jordan's TB component is no longer eligible for an allocation due to the disease burden classification changing to "Not High" in the 2021 Eligibility List. Jordan TB is part of an existing grant and is therefore eligible to receive Transition Funding in the 2023-2025 allocation period, noting that eligibility does not guarantee an allocation.

<sup>k</sup> Since Romania is not on the Organization for Economic Co-operation and Development's (OECD) Development Assistance Committee (DAC) list of Official Development Assistance (ODA) recipients, Romania may be eligible for an allocation for HIV for non-governmental or civil society organizations under Paragraph 9b of the Eligibility Policy only if there are demonstrated barriers to providing funding for interventions for key populations, as supported by the country's epidemiology. As 2023 is an allocation year, the Secretariat has conducted an assessment and has determined that Romania does not meet the requirements under Paragraph 9b of the Eligibility Policy. Therefore, Romania has been determined not to be eligible for an HIV allocation for the 2023-2025 allocation period.

<sup>l</sup> Romania's TB component is no longer eligible for an allocation due to the disease burden classification changing to "Not High" in the 2023 Eligibility List. Romania TB has an existing grant and is therefore eligible for Transition Funding in the 2023-2025 allocation period, noting that eligibility does not guarantee an allocation.

<sup>m</sup> Since the Russian Federation is not on the OECD DAC list of ODA recipients, the Russian Federation may be eligible for an allocation for HIV for non-governmental or civil society organizations under Paragraph 9b of the Eligibility Policy only if there are demonstrated barriers to providing funding for interventions for key populations, as supported by the country's epidemiology. As 2023 is an allocation year, the Secretariat has conducted an assessment and has determined that the Russian Federation meets the requirements under Paragraph 9b of the Eligibility Policy. Therefore, the Russian Federation has been determined to be eligible for an HIV allocation for the 2023-2025 allocation period, noting that eligibility does not guarantee an allocation.

<sup>n</sup> Venezuela is classified by the Global Fund as an upper-middle income country in line with the Eligibility Policy (see notes on methodology), even though Venezuela has been temporarily unclassified by the World Bank for the current World Bank Fiscal Year (2023) pending the release of revised national account statistics.

<sup>o</sup> The Global Fund Eligibility Policy provides that certain non-eligible countries may be recommended to be eligible for malaria in the event of a significant resurgence in malaria cases. The Board determined Venezuela's malaria component exceptionally eligible for the 2023-2025 allocation period, based on recommendations from technical partners and the Secretariat (GF/B47/EDP10).

<sup>p</sup> Acknowledging that Venezuela is the only country in the World Bank's classification system that is temporarily unclassified, the Board determined Venezuela's TB component exceptionally eligible for the 2023-2025 allocation period, based on recommendations from technical partners and the Secretariat (GF/B47/EDP10).

## Notes on Methodology

**Income classification:** The Global Fund's income level eligibility is based on the World Bank's income classifications: low-income countries (LIs), lower-middle income countries (LMIs), and upper-middle income countries (UMIs). As per the Eligibility Policy, the Global Fund uses the latest three-year average of GNI per-capita data (Atlas Method) to determine income classification, based on the latest World Bank classification thresholds (updated every July). In case of non-availability of World Bank GNI-per-capita data for one or more years, an average of the available data from the latest three-year period (e.g., two years) is used. In the absence of any GNI-per-capita data for the latest three-year period, the World Bank income classifications for last three years, if consistent, is used to determine income classifications. The Global Fund classification further divides LMIs into two groups, lower-LMIs and upper-LMIs, at the midpoint of the GNI per-capita range of the World Bank's LMI category. This division of LMIs does not affect eligibility but is relevant to the Global Fund co-financing requirements set forth in the Sustainability, Transition and Co-financing Policy<sup>6</sup>.

**Disease burden:** Disease burden data are provided to the Global Fund Secretariat by WHO and UNAIDS. All low and lower-middle income countries are eligible for funding, regardless of disease burden. The disease burden classifications used by the Global Fund are 'High' and 'Not High'. Disease burden criteria apply only to UMIs to determine their eligibility:

- UMI members of the Group of 20 countries (G-20 members) that were deemed ineligible prior to the approval of the revised Eligibility Policy on 9 May 2018 are not eligible to receive an allocation, unless they meet criteria under Paragraph 9b of the Eligibility Policy<sup>7</sup>.
- UMIs that are classified by the International Development Association (IDA) as IDA-eligible Small States, including Small Island Economies, are eligible for an allocation regardless of national disease burden.
- For HIV, UMIs must be listed on the OECD's DAC list of ODA recipients to be eligible to receive an allocation and apply for funding, unless they meet the criteria under 9b of the Eligibility Policy.
- UMI Exception to the OECD DAC Requirement for HIV: UMI countries that are not on the OECD DAC List of ODA recipients that have a 'High' burden of disease may be eligible for an allocation for HIV to directly finance non-governmental and civil society organizations, if there are demonstrated barriers to providing funding for interventions for key populations, as supported by a country's epidemiology. Barriers are assessed by the Secretariat every three-years in line with the allocation period.
- The Global Fund uses malaria data from earlier years (average of 2000-2004), as recommended by WHO, to determine eligibility. Each year WHO provides revised 2000-2004 estimates, which may result in a change of disease burden classification for some countries.

**Malaria-free exception:** Countries, regardless of income-level, that are certified as 'malaria-free' by WHO and are included in the official register of areas where malaria elimination has been achieved or are on the WHO 'Supplementary List' of countries that are malaria-free but not certified by WHO, are not eligible for an allocation, however they may be eligible for Transition Funding in line with paragraph 18 of the Eligibility Policy.

**Transition funding:** Components with an existing grant that become ineligible may receive funding for up to one allocation period following their change in eligibility in line with Paragraph 18 of the Eligibility Policy to support priority transition needs. The Secretariat, based on country context and existing portfolio considerations, will determine the appropriate period and amount of funding.

Transition (year): (Year) represents the year corresponding to the eligibility determination in which the component became ineligible.
